LOMAH TEXAS CRITICAL CONTROL POINTS

- 1) Herd Health
 - a. Herd tested annually for CAE, Tuberculous, and Brucellosis.
 - b. Herd maintains a negative status for CAE, Tuberculous, and Brucellosis.
 - c. Any goats with mastitis or other health concerns are pulled from the milk line and quarantined/ treated as needed until illness has been resolved.
- 2) Clean Water
 - a. Water tested once a year for coliform and contaminants.
 - b. Any level of contamination results in shutdown of all dairy operations until issues are identified, resolved and repeat testing results are clear of coliform and contaminants.
- 3) Milk Testing
 - a. Milk testing completed monthly by the end of each month.
 - b. Milk test results emailed to RAWMI by the end of each month.
 - c. Milk testing results are compliant with RAWMI Common Standards.
- 4) Milk/ Milk Product Storage
 - a. Milk cooled to under 40 degrees within one hour of milking.
 - b. All milk/ milk products stored in refrigerators with two minimum/ maximum thermometers and maintain a temperature at or below 40 degrees.
 - c. In the event that the refrigerator temperature exceeds 40 degrees for an extended period of time, milk/ milk products will be discarded.
